Kansas Journal of Medicine accepted into PubMed Central

WICHITA, KAN. – The KU School of Medicine-Wichita Office of Research recently learned that its Kansas Journal of Medicine has been accepted into PubMed Central, a free archive of biomedical and life sciences journal. PMC is a full-text searchable database of the United States National Library of Medicine’s extensive print journal collection.

“The Kansas Journal of Medicine is the only statewide medical journal,” said K. James Kallail, Ph.D., associate dean for the Office of Research at the KU School of Medicine-Wichita. “The journal publishes original research, reviews, commentaries, and case studies on all aspects of clinical medicine, health care delivery, health policy, and medical education. It features articles mostly by Kansas authors, particularly junior faculty, residents, and students. It was created as a vehicle to facilitate scholarly writing in our learners and as a way to publish information of particular interest to Kansas health care providers. Our reviews tend to be facilitative as we work with our local authors toward publication. PubMed Central provides online searching anywhere with internet access. This service benefits authors by making their works more available. Further, it benefits residency programs by documenting their scholarly publications for accreditation.”

“This has been a year-long process, meeting the technical and scientific requirements in order to be accepted into PubMed Central,” said Christina Frank, senior coordinator for the Office of Research.

Kallail is the managing editor/collection administrator and Frank is the editorial assistant for KJM.
